

Highlights and notes that come back on every visit

Page Notes, a Manifest V3 Chrome extension that highlights text on any website, keeps a note beside it, and finds both again on the next visit.

The problem

People research across many pages and lose what mattered. Saving a page position breaks as soon as the page changes, and many extensions ask for far more access than they need.

What I built

- Content script that highlights in four colors and re-anchors by quoted text and its context
- A notebook-style popup and in-page sidebar: date gutter, notes as quotes, Alt+N to open
- Saving sweeps the highlight across the line, then the note drops into the list
- Settings that follow the system light or dark mode, with search and JSON export and import
- UI in a Shadow DOM so the host page's CSS cannot break it

Measured results

16 checks

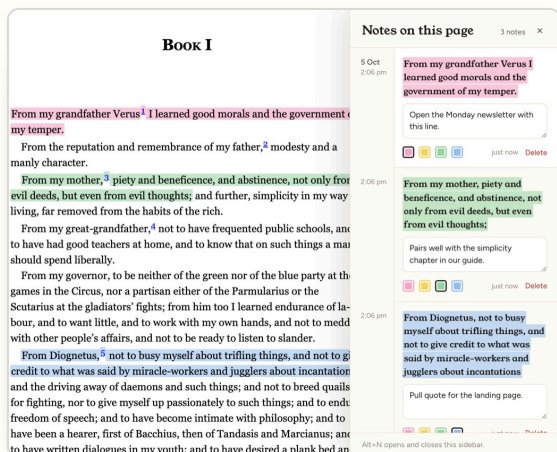

an automated run loads the real extension in Chromium and uses it on a public domain book

3 permissions

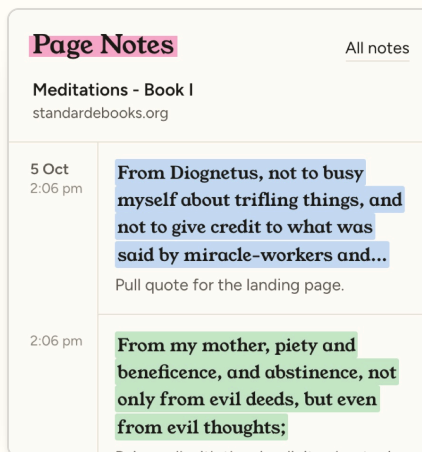

storage, contextMenus and activeTab only

0 requests

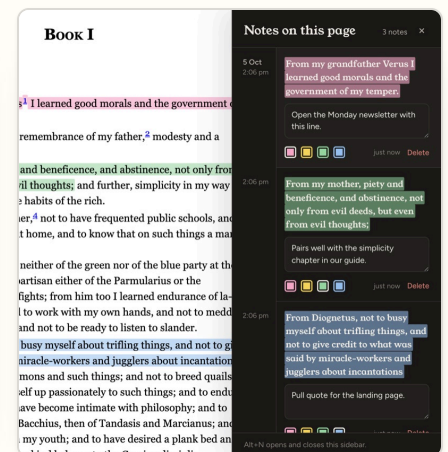

notes stay in the browser, nothing is sent anywhere

Highlights and the in-page sidebar

Toolbar popup

Dark mode, following the system
