

A helper bot that runs the busy work of a club server

Inkwell Helper serves Inkwell & Nib, a made up lettering club: onboarding, private support tickets and moderation, all with slash commands.

The problem

A volunteer-run community server gets support questions in public channels, new members never pick their interest roles, and moderation actions leave no record anyone can check later.

What I built

- A welcome card with a topic picker that assigns interest roles
- Private ticket threads with a topic menu, a details form, claim and close, and a readable transcript
- A private mod log, and /warn, /warnings, /timeout, /purge and /userinfo
- Links from new members blocked, and a /setup command that is safe to rerun
- Clear empty and error replies instead of silent failures

Measured results

6 of 6

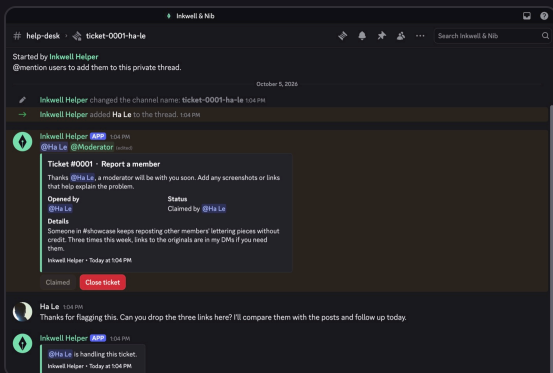

offline checks pass

Ticket #0001

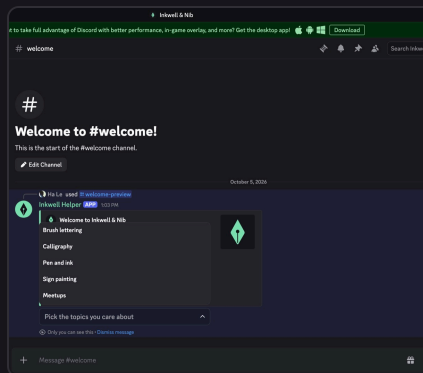

opened, answered, claimed and closed in a live server, transcript saved to the mod log

1 fix

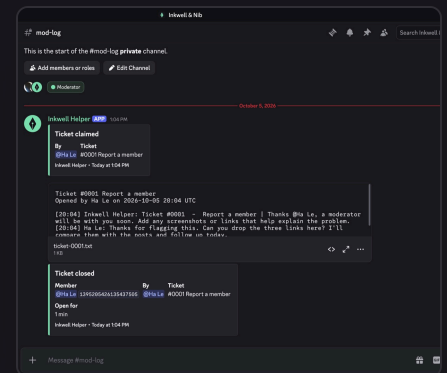

found in the live run: /warnings now shows display names, not usernames

A private ticket thread

The role picker

The mod log

The test server has no other members, so every human message in the screenshots is Ha's own account, both as member and as moderator.
